SUMMARY

Full-stack developer with 5+ years building production web applications, real-time data systems, and microservice architectures. Engineered with Spring Boot, Spring Cloud Gateway, Kafka event streaming, and WebSocket infrastructure supporting 500+ concurrent users. Reduced application load times by 75% through architectural optimization. Expertise in TypeScript, React, Node.js, NestJS, and Spring Boot backends, containerized deployments with Docker, and AI integrations via OpenAI Realtime API.

EXPERIENCE

Technical lecturer & App Engineer

Feb 2026 - Present

SRH Berlin

Berlin, Germany

- Mentored 10 M.Sc. Supply Chain students through full-stack development, providing architectural guidance and 1:1 debugging support across 48 hours of instruction.
- Developed complete curriculum from scratch covering Software Architecture, UI/API Design, Git workflows, and cloud deployment.
- Delivered a production Flutter/Dart capstone app with REST APIs and GCP deployment as the course reference project, demonstrating end-to-end delivery.

Full stack developer

Apr 2025 - Dec 2025

CISpace GmbH

Berlin, Germany

- Designed a multi-tenant booking platform (**React + Node.js + MongoDB**) for **1,000+** users and **47+** asset types, improving reservation flow speed by **75%** via **lazy loading** and indexed **DB queries**.
- Engineered protected dashboard with **JWT auth**, giving operators full **CRUD** over **200+** weekly reservations with usage analytics.
- Automated booking confirmation emails via **EmailJS** on reservation state changes, raising open rates by **45%** and reducing follow-up.

Backend developer

March 2022 - Aug 2023

Zarand Steel Co. (ZISCO)

Tehran, Iran

- Architected a real-time TypeScript data pipeline ingesting **5,000+** sensor records/sec from steel manufacturing equipment, eliminating manual data entry and cutting processing latency by **35%**.
- Conducted and owned a **WebSocket-based microservices** architecture with **REST APIs**, sustaining **500+** concurrent monitoring sessions with zero reported downtime.
- Led system reliability improvements including **JWT auth**, centralized error handling, and query optimization, reducing end-to-end dashboard latency by **35%** across all services.

Full stack developer

Apr 2019 - Jan 2022

Armeno Company

Tehran, Iran

- Architected an internal supply management platform (**Next.js + Node.js + PostgreSQL**) from the ground up, serving **50+** workers with real-time task assignment, progress tracking, and team coordination.
- Modelled a normalized PostgreSQL schema supporting multi-user tasks, status transitions, and role-based data access over all platform.
- Implemented Redis caching for active tasks and user sessions, reducing system response time by **30%** under concurrent load.
- Built Python data validation pipelines processing **50,000+** records, cutting manual input errors and enforcing data consistency.

SKILLS

Languages: Java, TypeScript, Python, SQL

Frontend: React (TypeScript), Next.js, three.js, Zustand, Tailwind CSS, Shadcn/UI

Backend & APIs: Node.js (Express.js), NestJS, Spring Boot (Spring Cloud Gateway, Spring Security, Kafka), Python (FastAPI), WebSockets

Databases & ORMs: PostgreSQL, MongoDB, Redis, DynamoDB, Prisma, Drizzle ORM

DevOps & Testing: AWS (EC2, Lambda, DynamoDB, API Gateway, S3), Docker, Kubernetes, CI/CD (GitHub Actions), Jest, JUnit

AI & LLM: OpenAI API (Realtime, GPT-4o), Prompt Engineering, Computer Vision (YOLOv8), Model Training & Deployment

EDUCATION

SRH Berlin University of Applied Sciences

Oct 2023 - Oct 2025

Master of Engineering (M.Eng.) in Technology Management (Grade: 1.9)

Berlin, Germany

Master Thesis: Built a real-time microgrid monitoring dashboard using React and Flask with Modbus/MQTT data ingestion, ML-based anomaly detection, and live visualization via Recharts and MongoDB.

Relevant Courses: AI I & II, Software Development, Data Analysis, Signal Processing.

PROJECTS

Classroom Management SaaS

React | TypeScript | NestJS | Spring Boot | Kafka | PostgreSQL | MongoDB | Redis | Docker | AWS EC2/S3 | Prometheus | Grafana

Production microservices platform with 8 containerized services built on Spring Boot and Spring Cloud Gateway (ES256 JWT validation via JWKS, Redis fixed-window rate limiting per role). Services include: Express auth-service (better-auth, GitHub OAuth, Arcjet bot detection), Spring Boot academic core (Stripe payment integration, Flyway migrations, Kafka event publishing), NestJS voice service (OpenAI Realtime API, PDF-to-voice via AWS S3), Spring Boot analytics (Kafka consumer), notifications, and a Yjs CRDT collaboration service (STOMP/SockJS, Redis pub/sub for multi-instance broadcast). Deployed on AWS EC2 with Nginx reverse proxy, SSL, and selective CI/CD via GitHub Actions (paths-filter rebuilds only changed services, tree-hash image caching). Full observability via Prometheus scraping all services every 15s with auto-provisioned Grafana dashboards.

Textile Defect Detection System

Python | YOLOv8 | AWS Lambda | ECR | API Gateway | S3 | Docker | GitHub Actions

Real-time AI quality control system for textile manufacturing. Trained a YOLOv8s model on 1,900+ labeled fabric defect images, achieving 4-class defect classification (stains, tears, loose threads, general defects). Deployed inference as a containerized Lambda function via Docker + ECR with automated CI/CD through GitHub Actions. Integrated API Gateway as the public REST endpoint and S3 for annotated result storage. Built a dashboard consuming the serverless API, displaying real-time bounding boxes and confidence scores.

macOS clone | [Website](#) | [SourceCode](#)

TypeScript | React | Node.js | Vite | Zustand | GSAP | AWS Lambda | API Gateway | Terraform

Interactive macOS-style portfolio with an integrated GPT-powered AI assistant, real-time chat via REST API, and GSAP-driven animations. Migrated backend from EC2 to serverless AWS Lambda + API Gateway, with infrastructure managed via Terraform and automated deployments through GitHub Actions CI/CD.

T-shirt Customizer | [Website](#) | [SourceCode](#)

React | Three.js | WebGL | Node.js | JWT | PostgreSQL

3D product visualization platform with real-time texture rendering, camera controls, and GPU-optimized mesh rendering. Implemented user authentication, persistent design storage, and performance optimization for smooth 60fps rendering across devices.

Real Estate | [Website](#) | [SourceCode](#)

Next.js | TypeScript | Tailwind CSS | REST API

Property listing platform with advanced filtering, search, and server-side rendering for SEO optimization.

CERTIFICATES

Docker Professional (Docker) | React.js Training (LinkedIn) | Web Development (IBM) | Design Computing with Python (Michigan University)
